PRD: AI Feedback V1.1

PRD — AI Feedback V1.1

Overview

V1.1 focuses on improving feedback quality and alignment while initiating a mobile-first direction.

This version introduces:

- Mobile Experience
- Teacher rubric creation in Back Office
- Teacher rubric selection at upload
- Image upload and photo capture support (in addition to PDF)
- Optional assignment/question definition at upload
- Passing question context through the full AI pipeline
- Feedback summary (an overview of the entire feedback, guiding the student on how close they are to excellence)

Competition (Delta Insight)

atama+

- Expected (June launch):
  - AI-powered feedback features
  - Likely tightly integrated with curriculum + structured inputs

---

Net Insight

V1.1 must shift positioning toward:

- Mobile-first usage patterns
- Supporting teacher-aligned feedback systems (rubric integration)

Hero Loop

Upload assignment draft → Receive teacher-aligned feedback → Iterate

---

User Flows (Additions Only)

Flow 1 — Teacher Rubric Creation (Back Office) (NEW)

User Story

As a teacher, I want to create a rubric based on an assignment so that AI Feedback aligns with my evaluation criteria.

Functional Requirements

- Teacher can create a new rubric in the back office
- Teacher defines:
  - Assignment question
  - Assignment overview
- System generates a rubric based on this input
- Teacher can edit the generated rubric
- Teacher sets:
  - Subject
  - Grade
  - Teacher (owner)
- Teacher clicks save to persist the rubric
- Teacher can regenerate the rubric:
  - Regeneration overwrites any edits made to the rubric
- Teacher can save or update rubrics

Non-Functional Requirements

- Mobile-first: design and build for mobile as the primary experience; on desktop, ensure feature parity/functionality works with no additional design requirements

Design: Pending

Flow 2 — Image Upload Support (NEW)

User Story

As a student, I want to upload images of my assignment and question so that I can submit work easily.

Functional Requirements

- Support image upload for:
  - Assignment document
  - Assignment/question definition

- Supported formats:
  - jpg, png, heic
- Maximum image count:
  - Assignment document: up to 2
  - Assignment/question definition: up to 2
- Images are processed via OCR and converted into text

Non-Functional Requirements

- Mobile-first: design and build for mobile as the primary experience; on desktop, ensure feature parity/functionality works with no additional design requirements
- OCR accuracy target ≥97%
- Must handle partial extraction gracefully

Design: Pending

Flow 3 — Photo Capture Support (NEW)

User Story

As a student, I want to take photos of my assignment and question so that I can quickly submit work from mobile.

Functional Requirements

- Support taking photos for:
  - Assignment document
  - Assignment/question definition
- Maximum photo count:
  - Assignment document: up to 2 snaps
  - Assignment/question definition: up to 2 snaps
- Photos are processed via OCR and converted into text

Non-Functional Requirements

- Mobile-first: design and build for mobile as the primary experience; on desktop, ensure feature parity/functionality works with no additional design requirements
- OCR accuracy target ≥97%
- Must handle partial extraction gracefully

Design: Pending

Flow 4 — Define Assignment Question (NEW)

User Story

As a student, I want to optionally define the assignment/question so that I can receive more relevant feedback.

Functional Requirements

- At upload, student can optionally:
  - Input assignment/question (free text)
- Supported formats:
  - Text (manual input)
  - PDF
  - Image

Non-Functional Requirements

- Mobile-first: design and build for mobile as the primary experience; on desktop, ensure feature parity/functionality works with no additional design requirements
- Question input must be optional and skippable
- Input UX must be lightweight and mobile-friendly

Design: Pending

Flow 5 — Select Rubric (NEW)

User Story

As a student, I want to select a rubric so that I can receive teacher-aligned feedback.

Functional Requirements

- Student can select a rubric:
  - If teacher-defined rubric exists → selectable
  - Else → fallback to AI-generated rubric (V1 behavior)

Non-Functional Requirements

- Mobile-first: design and build for mobile as the primary experience; on desktop, ensure feature parity/functionality works with no additional design requirements

Design: Pending

Flow 6 — Feedback Summary (NEW)

User Story

As a student, I want a clear summary of my overall performance so that I can understand how close I am to excellence and what to focus on next.

Functional Requirements

- Feedback summary is generated by the Feedback Agent (co-generated with detailed feedback)
- Summary must:
  - Reflect overall quality of the assignment
  - Indicate how close the student is to excellence
  - Synthesize insights from all feedback items and rubric evaluation
- Summary is shown prominently above detailed feedback

Non-Functional Requirements

- Mobile-first: design and build for mobile as the primary experience; on desktop, ensure feature parity/functionality works with no additional design requirements
- Summary must be concise and scannable
- Must avoid generic statements
- Must accurately reflect underlying feedback and rubric signals

Design: Pending

Context Flow (Additions Only)

- Rubric Agent
  - New input: Optional Question
- Feedback Agent
  - New input: Optional Question
  - New output: Feedback summary
- Chat Agent
  - New input: Optional Question

Out of Scope (V1.1 Additions)

- DOCX support
- Iterative feedback / re-upload
- Teacher dashboard

- Mobile UI redesign (only direction, not implementation)

Key Differences from V1

- Added question definition at upload (text / PDF / image / photo capture)
- Added teacher rubric selection
- Added image upload and photo capture support (assignment + question, up to 2 snaps each)
- Added context propagation across all agents
- Added feedback summary (overview of overall performance)

Notes / Risks

- Rubric selection UX complexity on mobile
- Context overload risk (document + question + rubric)
- Strength feedback quality risk (generic outputs)
